MOVIS

THE PLACE FOR WRITING INSTRUMENTS
THAT PEOPLE ARE RELUCTANT TO LET GO.

AT SOME POINT YOU HAVE TO PUT DOWN YOUR
WRITING INSTRUMENT. BUT NOT JUST ANYWHERE.

Locksor

It's possible to read someone's personality from their handwriting. And their choice of writing instrument indicates their style. Even if the reservoir inside never sees a drop of ink. Locksor Movis protects special writing instruments in a special way with ideas covering everything down to the last detail.

Discover a place for writing instruments that has been more thoroughly thought through than ever before. Individually made by hand. No compromises in material or functionality. For a collection that also inspires when it is being transported, presented or stored.

MOVIS: THE COLLECTION OF IDEAS
FOR BETTER STORAGE.

Locksor

Movis is just the surroundings. But with more inside. Materials of the best quality, elaborate closing mechanisms, meticulous workmanship. In addition, sturdiness and functionality that are unique to the collection of writing instruments. We put more ideas into Movis, more engineering expertise and places for 12 writing instruments. But above all, more enjoyment of the collection.

Aluminium becomes a precious metal.

Every Movis case is made from a high-grade aluminium alloy, CNC-machined from a solid block. Glass bead blasting and anodizing transform the surface and make it robust, scratchproof and resistant to corrosion. With a hardness grade on the Mohs scale not far from that of a diamond. In addition, only parts made from the purest stainless steel are used.

Safe at first sight.

SCHOTT Mirogard Protect absorbs 99 % of incident UV light. Sensitive materials such as ebonite are reliably protected. Practically reflection-free and colour-neutral, the writing instruments are always the center of attention. In fact, this laminated glass represents a reference point for mechanical protection.

Just like leather, only better.

Alcantara® is as fine as leather. In contrast, however, it contains no tannins or salts that could corrode the metals or surfaces of writing instruments. It is set with a water-soluble adhesive for optimal protection against chemical reactions. During transport, the cover cloth prevents contact with the glass. The Movis's base is also covered with Alcantara® for a stable position during presentation. And the transport bag made from Alcantara® protects the Movis wherever you are.

WRITING INSTRUMENTS ARE NOT THE ONLY THING
WORTH COLLECTING – SO IS THE MOVIS.

Locksor

① Indentations on the sides for perfect ergonomics and a secure hold.

② Removable cover with predefined aperture angle. With unlocking hinges for easy removal.

③ Movis is opened by push buttons. The cover is raised by a spring mechanism.

④ 12 compartments with a special profile for optimal hold and a uniform, consistently parallel positioning of the writing instruments.

⑤ An interior made of fine Alcantara® protects against chemical reactions of surfaces and metals.

⑥ The case is machined from a solid block. With a robust surface designed to meet the demands of transport.

⑦ SCHOTT Mirogard Protect. Light protection factor 100 absorbs 99% of UV radiation. Practically reflection-free laminated glass.

EVERYTHING ABOUT COLOUR, CARE AND
ENDURING ENTHUSIASM.

Locksor

The home for writing instruments is available
with six interior fittings.

Movis fits the colour of your collection.
With the Alcantara® interior and the Alcantara®
cover cloth. Which tone suits you best?

Black 9002

Tobago 9022

Red 4996

Mango 2969

Natural light 2909

Pearl white 2911

Colour specifications may vary due to technical printing reasons.
We would be happy to send you an authoritative Alcantara® colour
sample.

Care instructions for the purest enjoyment.

How to clean Alcantara®.

You can clean the Movis interior carefully with a damp cloth. Do not use any printed or impregnated materials, as staining could result. You can safely wash the Movis cover cloth and the transport bag either by hand or machine at 30° C.

SCHOTT Mirogard Protect stays perfectly clear.

For cleaning, use an ordinary commercial glass cleaner and a soft cloth. A mixture of spirits or alcohol with water in a 1:1 ratio may also be used. The cleaning agent should not contain any elements that might scratch or scour the surface.

Eloxal: not just a superficial examination.

The Movis Eloxal surface is very tough. Therefore, when cleaning it, please only use a pH-neutral agent without any scouring elements.

YOU ONLY NEED TO THINK ABOUT YOUR COLLECTION.
LOCKSOR HAS THOUGHT OF EVERYTHING ELSE.

Locksor

Small details add up to make a big difference. For example, the unlocking hinges for simple removal of the cover. Or the practical transport bag with laser inscription.

YOU MAKE NO COMPROMISES IN YOUR COLLECTION.
LOCKSOR MAKES NONE IN ITS MATERIALS.

SCHOTT MIROGARD® in comparison

SCHOTT
glass made of ideas

	Conventional Window Glass	SCHOTT MIROGARD Protect®
coefficient of reflection	ca. 8%	ca. 0.9%
coefficient of transmission	ca. 91%	ca. 98%
colour reproduction	limited	very good, unaltered
shatter protection	no	yes
mechanical protection	small	medium to high
UV protection (300 nm – 380 nm)	ca. 44%	ca. 99%
glass thickness	2 – 8 mm	4 – 8 mm

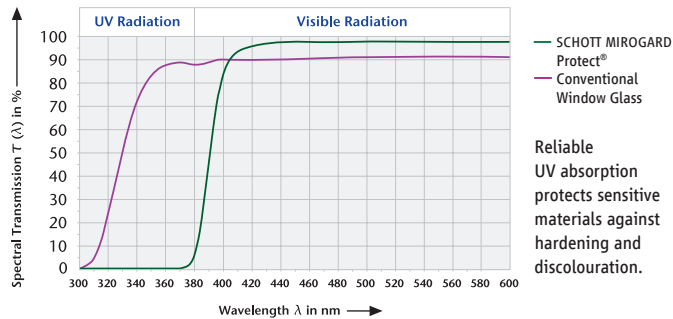

Not all glass is created equal.
The comparison makes the quality easy to see.

Cross-section of the Movis storage profile for writing instruments. The specially developed form ensures uniformly parallel and vertical positioning of collection pieces.

The Movis makes more of your collection.
You can rely on it.

The only glass used for the Movis is
SCHOTT Mirogard Protect, which meets
museum-quality standards.

The storage profile:
flexible in diameter and size.

In the Movis storage profile, writing instruments are
always positioned exactly, whether short or long,
slight or more substantial. And there is no chance of
writing instruments jumping out of position during
transport, even for those with a small diameter.

Movis: the technical data.

Width: 305 mm
Depth: 182 mm
Height: 35,1 mm
Weight: 1.750 g

Movis is designed for 12 writing instruments
with a maximum length: 155 mm a
maximum diameter: 20 mm.

Tannins and salts in leather can corrode surfaces and metals.
This is not true of Alcantara®. It is 100% neutral and is applied
without using any solvents.

WHAT IS THERE TO EXPLAIN? IT'S PASSION.

Locksor

Magda Klink-Völker, CEO at Locksor and
Thomas Völker, CEO, engineer and developer of Movis.

There are feelings for objects. Emotional responses to grandeur.
Joy in form and colour. Respect for the art of workmanship.

It is a dedication to materials. The desire for uniqueness.

Yes.

But it is never a question of reason. Anyone who shares the
passion of collecting understands.

Locksor provides a framework for this passion. With items that
protect treasures and intensify the experience of collecting.

Because it is about the encounter with the objects that speak
to our senses. About valuable moments. And nothing less than
enthusiasm for life itself.

That's why Locksor items go beyond the ordinary. Every detail,
every component, every function represents the achievements
of engineering technology. The least that can be done in the name
of true passion.

LOCKSOR. SIGNIFICANCE NOT EVERYONE CAN SEE.
